The printer is a USB and we just have a basic workgroup wireless network I was thinking that if i can not network from XP to OSX within the same machine, i MIGHT be able to just keep OSX with using the printer that is attached at the USB, and use XP to connect to our network and print on the server computer's printer which i can just add to SHARE.. The printer will be available through the virtual machine's parallel port To share your Mac's printer: Launch Parallels Desktop and open the virtual machine.. Open the Virtual Machine Configuration dialog by choosing Configure from the Virtual Machine menu.. Open the Windows Start menu, select Control Panel In the Control Panel window, select the Printers and Faxes (or Printers) item.. Click OK to close Virtual Machine Configuration Start the virtual machine Share A Printer Win 10In the guest OS, no matter what type of printer you have, install either the HP Color LaserJet 8500 PS, or Apple Color LW 12/660 PS printer driver.. Open the Virtual Machine Configuration dialog by choosing Configure from the Virtual Machine menu.. Warning: Do not install the driver from the installation CD, supplied with your printer, in the virtual machine.. How To Share Desktop ScreenShare A Printer Win 10Please check that you are following steps bellow, Note, it is necessary to uninstall all custom drivers Sharing a Mac Printer You can share any printer connected to you Mac with your Windows or Linux virtual machine.. The printer is now connected directly to Windows and starts installing the drivers automatically since most of the latest versions of Windows are smart enough. b0d43de27c [Firefox 5 For Mac Os X](#)
